

Summer Undergraduate Research Experience in Neuroscience

Sponsored by the National Institute of Neurological Disease & Stroke

Research

Experience research first-hand, on-campus in the laboratory of a neuroscientist in Delaware. Work collaboratively on projects related to biology, psychology, or kinesiology.

Neuroscience

Researchers in Delaware are studying Alzheimer's disease, fetal alcohol syndrome, PTSD & anxiety, neuromuscular disease, epilepsy, the biology of learning & memory, neural development, & the biological consequences of early life trauma.

Program Details

Eligible students are in a science or health related major, are a US citizen, permanent resident, or have DACA status, are on track to graduate December 2021 or later, and have completed 25 credits of college classes.

Stipend: \$4,000

Program dates: June 1 – July 30
